

## 2. Anchoring

### Devil's Claw Chain Stoppers

The Devil's Claw Chain Stopper units are designed to be used with Lewmar V8 to V12 windlass range.

- Paddles hold the load of the anchor and chain when at anchor; taking the load off the windlass
- Devil's Claw is used for tensioning the anchor chain when the anchor is stowed, preventing it from moving when under way.
- Required by classification societies at 80%, Lewmar exceed the breaking load of these units which is calculated at 125% of the breaking load of the chain.
- Stopper paddles made from high tensile 17-4PH Stainless Steel, and the main bodies are made from 316 Stainless Steel, combined with an integral high tensile 17-4PH Stainless Steel stopper block.
- Available in horizontal & vertical configurations and a wide range of chain size from 12.5 to 22mm.
- Vertical units have the Devil's Claw operating vertically, while horizontal units have the Devil's Claw operating horizontally.
- The height of chain operation is designated by windlass size. For example, it is possible to use a V8 size unit with a V9 windlass if the Devil's Claw is mounted on a plinth to raise it to the correct height.
- Custom options available. Contact [custom@lewmar.com](mailto:custom@lewmar.com) for more information.
